Re: Infusion of Capital against a Cash Backed BY AXIO COIN

AXIO STRATEGY

Axio invests in all types of assets to keep a diversified portfolio of asset. The strategy is to take-over assets that are illiquid, where after funding shall be obtained by issuance and sale of treasury shares. Thereby, these assets suddenly become realizable, hence providing a great potential for Axio.

Axio will invest in NASDAQ 100 and S&P and top 100 European stocks and top 10 HONG KONG STOCKS.

We often make agreement with the previous owners of the assets, so we ensure they come along to develop or sell the assets.

RISK VS. RETURN

There is always a risk involved when having an illiquid asset, and wanting to develop it into a liquid and realizable asset. Therefore, we always have third party valuations of the assets, and always keep a strategy for each of the assets. By doing so, we find that the possible return for each asset more than compensate the risks involved.

As many assets have different risk and return, Axio. work to maintain the optimum investment based on the selected assets.

We expect net return of 100% per year based on our Dynamic strategies. We will pass 80% if all profits back to the coin holders.
